Calculated as gross inputs divided by the latest reported monthly operable capacity. See Glossary. Percentages are calculated using unrounded numbers.

Beginning in 1993, motor gasoline production and product supplied includes blending of fuel ethanol and an adjustment to correct for the imbalance of motor gasoline blending components.

E=Estimate based on data published for the most recent month in the *Petroleum Supply Monthly*.

Note: Production statistics represent net production (i.e., refinery output minus refinery input).
